# Rules of The Game

The rules for a 9x9 Sudoku puzzle are straightforward:

1. The puzzle consists of a 9x9 grid, which is subdivided into nine 3x3 subgrids (referred to as "regions" or "boxes").
2. **Objective:** The goal is to fill the grid so that every row, every column, and every 3x3 subgrid contains the digits from 1 to 9 without repetition.
3. The puzzle starts with some numbers already filled in.
4. **No Repeats:**
  - **Rows:** Each row must contain the digits 1 to 9 without any repetition.
  - **Columns:** Each column must also contain the digits 1 to 9 without any repetition.
  - **Subgrids:** Each of the nine 3x3 subgrids must contain the digits 1 to 9 without any repetition.
  -

The challenge lies in deducing the position of each digit based on the given numbers and the constraints of rows, columns, and subgrids.
